Application:

Tolfenamic acid exerts its antipyretic and analgesic effects by inhibiting the production of cyclooxygenase. Currently, it is mainly used in the treatment of diseases such as rheumatoid arthritis and migraine in clinical practice. In recent years, scholars at home and abroad have conducted various studies on this and found that Tolfenamic acid plays an important role in inhibiting tumor cell growth, regulating tumor cell apoptosis, interfering with tumor cell signaling, regulating the activity of oncogenes and tumor suppressor genes, and inhibiting tumor angiogenesis
