**Product name: Dimethyl phthalate**

**CAS: 131-11-3**

**Molecular wight:194.18**

Item	Standard
Color(Pt-Co)no.	≤10
Content(GC)%	≥99.5
Water %	≤0.08
Density%	1.191-1.195
Acid Value %	≤0.01

### **Application:**

Dimethyl phthalate is a plasticizer with strong solubility in a variety of resins and is compatible with cellulose, rubber, and vinyl resins. Dimethyl phthalate has good film formation, adhesion and water resistance. It is usually used in combination with diethyl phthalate in the production of cellulose acetate films, varnishes, transparent papers and molding powders. Dimethyl phthalate is used in small quantities in the production of nitrocellulose. The product can also be used as a plasticizer for nitrile gum, and the product has good cold resistance. Dimethyl phthalate mixed with other plasticizers can overcome the disadvantages of high volatility and low temperature crystallization. Dimethyl phthalate can also be used as a solvent for repellent and DDT. It is also used as a gas chromatography fixative.

### **Package:**

Usually packed in 220kg/drum, and also can be do customized package.
