

Technical Data Sheet

Name: Naphthalene-2,6-disulfonic acid

CAS: 581-75-9

Molecular Formula: C₁₀H₈O₆S₂

Molecular Weight: 288.3

EINECS: 209-471-9

Packing: 25kg/drum

Technical indicators:

ITEM	STANDARD
purity	≥97%
density	1.704±0.06 g/cm ³
appearance	White powder

Uses: 2, 6-naphthalene disulfonic acid is an important chemical intermediate, mainly used in dyes, medicine and concrete additives. For example, through alkali fusion synthesis of 2, 6-naphthalene disulfonate dihydroxynaphthalene, the product has high added value and broad market prospects, in fibers, packaging containers, electronic components, dyes and medicine and other fields have a wide range of applications, especially the preparation of various polyester materials and liquid crystal polyester resin important monomer.
